                                               5) V
3) ¬
                                                                                               9) D
                                                                                                                                           10) ¬
  4) A
                                               6) B
                                                                                          7) C
                                                                                                                                             11) E
```

Starting proposition is:

 $\neg A \land (B \lor C) \lor D \land \neg E$ 

Rules are as follows:

1) I calculate the importance of each operator, and at each step I choose the one with the least importance

2) Then I split my propositon to the left of the operator, and to the right of the operator

3) I repeat step 1, 2 until my current proposition is empty

4) When connecting nodes, I always connect them first as left child, then as right child

5) When opening a paranthesis I increase the importance with 100

Current proposition is:

 $\neg$  A  $\land$  ( B  $\lor$  C )  $\lor$  D  $\land$   $\neg$  E
